ROUNDTABLE

National databases:

How are they collected, analyzed, and disseminated

ABOUT THE ROUNDTABLE

This session aims to share information on how the national data regarding the well-being of workers and psychosocial factors at work are collected, analyzed, and utilized in different countries and how the findings are disseminated and delivered to policymakers, organizations, and citizens. **Dr. Jari Hakanen** from the Finnish Institute of Occupational Health will share knowledge of a recently launched survey in Finland regarding working conditions and employee well-being and workability among the general working population. **Dr. Naomi Swanson** from the US National Institute for Occupational Safety and Health (NIOSH) will provide information on the NIOSH Quality of Worklife Survey (QWL), a national survey in the United States devoted to tracking work organization factors and their impact on worker health and safety. **Dr. Tomohiro Ishimaru** from the University of Occupational and Environmental Health, Japan will deliver information on The Collaborative Online Research on the Novel-coronavirus and Work (CORoNaWork) Project, a pioneering national-level epidemiological survey dedicated to examining occupational practices and health during the COVID-19 pandemic.

We encourage all congress attendees to join this session who are interested in gaining knowledge of methods and strategies to conduct national-level surveys.
